Thanks to the authors for their important article. It's really interesting. However, I found some problems in the writing as below;

1. English language is not standard.
2. Methodology part is very weak. The authors should include a data analysis section here.
3. The authors sometimes used Global Forest Watch and sometimes Green Forest Watch. The authors should take care of this issue.
4. Discussion part should be improved much.
5. Conclusion part is also very weak. More indication and clarification is needed in the conclusion part.
