Pressure-induced localized lipoatrophy

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Pressure-induced localized lipoatrophy. ORPHA:90160*

Pressure-induced localized lipoatrophy is a rare, acquired, localized lipodystrophy characterized by band-like, horizontal, asymptomatic, lipoatrophic depressions with clinically normal overlying skin usually involving the anterolateral aspect of the thighs. An identifiable history of the repeated mechanical microtrauma due to occupational or postural habits is present.
