

Review of: "[Review Article] Review of *Streptococcus pyogenes*"

Katarzyna Napiórkowska-Baran

Potential competing interests: No potential competing interests to declare.

The work is very interesting and valuable, especially in the context of the constantly increasing number of infections. In the abstract, the last sentence is misleading. Please correct: The main objectives of this review are to know the causes of *Streptococcus pyogenes* infections.

It would be worth writing that infections may also occur in people with immunodeficiencies, both primary and secondary.
