Title: Coconut Flower – market potential and future forecast in Coconut Land (Bến Tre), Vietnam

Corrections:

Topic: Summary

Suggestions: Write about the location (study area), as you only wrote about the product. However, the study addresses the relationship between two factors: product (a market) and a region/area. It is necessary to write about the methodological process of the work. This is a bibliographic review, so this information should be included in the summary.

Topic 1: Overview in the Land of Coconut Trees (Xứ Dừa) Suggestion to write "Overview of the study place" For FAO data presented, seek more up-to-date sources.

Image 1: suggestion to segment the image with caption A, B and C. Because it is representing a mixed image, that is, three processes. It would be great to make a segmented caption describing each of the three steps in the same image.

Last topic: Conclusions and recommendations for the province of Bến Tre in the future of a socialist-oriented market economy Fix: Some information is characteristic of Initial Panorama, which can be transferred to Topic 1.

General recommendations: In general, I suggest reorganizing the topics and structure of the text. As the general objective was to approach the aspects that influence the quality of the product for the evolution of the activity in the region, I suggest creating a broad topic entitled "Factors that influence the activity", like this:

- Plant management (height)
- Use of technologies
- Seasonality (season of the year)
- Time and time of collection
- Bleeding method
- Location of the area

All these factors were identified throughout the text and may well structure a new text with the same existing content.

Adjusting only the content within each of the above topics.
