Potential competing interests: No potential competing interests to declare.

My observations are:

1. The abstract should be more concise and outline the main objectives.
2. There are some typos and grammatical issues to fix.
3. The main novelty of the work should be in a separate paragraph in the introduction section.
4. Literature work needs to be enhanced by adding more recent works
5. There should be a strong mathematical explanation w.r.t. the proposed approach.
6. Elaborate on your methodology; the methodology figure needs to be added.
7. Results should be improved with more samples; a comparative analysis with recent methods is required.
8. Add simulation settings in a separate table to recreate the work; add details on the DB used.
9. The minor structural issues need to be fixed.
