Low Grade Squamous Intraepithelial Neoplasia

National Cancer Institute

Source

National Cancer Institute. *Low Grade Squamous Intraepithelial Neoplasia*. NCI Thesaurus. Code C8335.

A precancerous neoplastic process characterized by the presence of mild dysplastic cytological changes which are usually present in the lower part of the squamous epithelium. Representative examples include the low grade esophageal squamous intraepithelial neoplasia, low grade cervical squamous intraepithelial neoplasia, low grade vaginal intraepithelial neoplasia, and low grade vulvar intraepithelial neoplasia.
