Potential competing interests: No potential competing interests to declare.

I think this is an interesting overview of problems and possible solutions for housing problems in developing countries. I especially like the presentation of good examples and that the paper both discusses middle and lower income groups, as I believe that it is important to have broad measures that affect a larger share of the population.

The structure of the paper, however, needs to be improved. The methodology section should come at the beginning, and what is called Results should be called Discussions and should be extended.
