**Potential competing interests:** No potential competing interests to declare.

This study is interesting as it cover the activity held during night time and will help on purposing suitable activity with the reported cases and regulation impose by government.

Method & technique used must briefly explain in abstract and the significant of the study to the nightlife activity.

It is better if could get statistic for recent year in 2022 rather than 2021. For statistic or any numbers relating to government or safety census should refer to official statement rather than from individual authors.

Authors should cited the statement properly and discussion must be clear. Refering to regulation of nightlife activity and the compliance of the authority and government guidelines would be good. Should refer recent study latest 5 years not from 2006 study.

The study conducted was interesting but it could be goo if can share the method use and how does it conducted while collecting the primary data for selected area. The study also must correlate with the type and number of cases for each area that cause inactivity or less activity during night time.
