The paper presents a useful system for food data automation. A few suggestions pertaining to the paper:

- The system looks more like a SaaS rather than PaaS. Authors can add some more details as to how this qualifies as a PaaS
- Section 2 Methods can be changed to a Background section OR some methodologies used in the work may be illustrated here
- In Fig 2, Data Centre is shown twice. Can it be changed to once?
- Table 3 needs more description. Eg. what does % denote here? If computational is 85-90%, what is the meaning?
- How is the runtime for data request configuration integration on the cloud platform calculated to be 80%-95%? Some details can be added.
