Dear Authors

You chose an interesting topic for writing a manuscript.

I have noticed the following issues.

1. Methodology needed to be better explained. Questionnaire form needed to be included in the manuscript.
2. Is there any data regarding COVID-19 Exposure to preclinical year students? Is there any information regarding the proper use of personal protective equipment in the clinical year students who were covid 19 positive?
3. Result section needs improvement
4. Discussion section is good but too long

Thank you, and Best of Luck
