Dear Editor-in-chief

Thanks to the authors, my comments to improve the quality of the article as much as possible are as follows:

- In the introduction section, it is better to write about the state of mental health and quality of life of children undergoing cancer treatment and related data.
- *The manuscript was very good in terms of methodology, but the authors' contributions were unclear.*
Who conceived and designed the evaluation?
Who collected the clinical data?
Who interpreted the clinical data? Who performed the statistical analysis? Who drafted the manuscript?
Who revised it critically for important intellectual content?
Did all authors read and approve the final manuscript?

Yours sincerely,

Shirin Hasanpour
