

Review of: "Ameliorating the Impact of Climate Variability on Pesticide Dynamics and Efficacy"

Astrid Jankielsohn¹

¹ Agricultural Research Council, South Africa

Potential competing interests: No potential competing interests to declare.

The publication explores the influence of climate change on agroecosystems and specifically the change in geographic distribution and adaptability of pest organisms to these changes and the efficacy of pesticides managing these organisms. This is a significant contribution to the research focus to find ways to mitigate the effects of climate change in agriculture and ensuring food security. It is recommended that this publication is accepted with minor changes. My comments for changes are noted in the attached manuscript.
