

Review of: "Solving Pallet loading Problem with Real-World Constraints"

Huali Fan

Potential competing interests: No potential competing interests to declare.

The article studied the pallet loading problem with the consideration of some real-world constraints and used the brach and bound method to solve it.

The comments on the article are given as follows.

1. Add the outline of the article at the end of the introduction section.
2. Review the pallet loading problem studied in literature by giving a brief introduction of the problem characteristics and the additional real-world constraints considered to show the differences of the problem studied in this article.
3. Give a formal description of the problem under study.
4. Section "Method for Solving Pallet Loading Problem" should be structured to improve the readability of the article.
5. Clarify if there is difference between the brach and bound method used in this article and those used for solving the pallet loading problem in literature.
6. Indicate the specific data of the problem instance used in the experiment.
