Potential competing interests: No potential competing interests to declare.

1. The introduction of the work lacks the parameters typical of the introduction of a scientific article. The introduction to a publication is more like a theoretical analysis than an introduction.
2. The analysis of the scientific literature of recent years is missing.
3. Since the article aims to reveal Sharing Economy Practices in Changing Business Environment, a clearer periodization of changes in the business environment is lacking, thus clearly demonstrating the differences of sharing economy practices.
