We express our sincere gratitude to Qeios for giving us the chance to review this research titled "The Influence of Hot Extrusion on The Mechanical and Wear Properties of an Al6063 Metal Matrix Composite Reinforced With Silicon Carbide Particulates."

1. The abstract should be more detailed and provide information on the outcomes.
2. The introductory section needs more attention to clarify things in depth; it would be preferable if it were rewritten in the first paragraph.
3. It would be great to have high-quality photos and graphs instead of the poor quality ones.
4. It would be beneficial to include EDS and XRD analyses with this approach, if it is possible.
