

Review of: "Effect of Bromide on Livestock Development: a Review"

Tanmoy Rana

Potential competing interests: No potential competing interests to declare.

The manuscript is haphazardly written, and there are many places where the thoughts or sentences are not quite understandable. There are many places where wrongly used words, phrases, and grammatical errors are evident in the manuscript. The authors are requested to check the manuscript carefully and correct it accordingly.

The theme of the abstract is not highlighted or reflected to emphasize the title. Please modify the abstract by noting a brief primary objective. The abstract is unnecessarily elaborated and applies data twice, in the abstract and results sections. Please concise the abstract, emphasizing the relevant importance and outcomes of the novelty of the study.

What is the importance of the study? Please add a few lines to strengthen the objectives of the study andhow does it differ from others? What are the indications of the study? Please add them in the last portion of the introduction section. The discussion portion is written haphazardly, unnecessarily elaborated in the manuscript, and difficult to correlate with each other. Please modify the discussion in a systemic manner with relevant references. Please modify the discussion by strengthening the results. There is also a lacuna in the representation of the discussion in the present endeavour. Please modify the discussion with proper justification and analysis by strengthening the novelty of the work.

The conclusion portion is also weak. Please concise the conclusion by removing data in that portion. The conclusion is not only the representation of the discussion but also the progress, perspectives, and future strategy of the novelty of the study. Please strengthen the conclusion portion to reflect the outcomes of the study. A future perspective is needed for inclusion in the same portion.

Overall, the manuscript needs huge revision. The authors are requested to rewrite the manuscript carefully with elastic descriptions about the novelty of the research work.
