The manuscript needs more information; there is a need for major revision at multiple places in the draft. The introduction requires more information, including the current market and demand for cantaloupe, specifically in the country or area where the research has been conducted, what favorable climatic conditions are needed, and what kind of geographical and weather issues the farmers face. Also, a test of significance (Tukey HSD t-test) should be conducted at a defined level (1% or 5%) to evaluate the difference between the values. Figure 2 should be converted to English. Also, check the grammar and English language throughout the manuscript. References are also limited; more studies can be referred to for the additional information required.
