Potential competing interests: No potential competing interests to declare.

The authors are commended on their pithy commentary. The subject is most relevant to today's times when everyone is in a scramble to embrace AI, often without the accompanying awareness of possible systematic failures, and issues of safety and ethics.

The edifice of medicine as practiced today was built both on 'randomized trials' and 'correlations and associations'. There are immense benefits to be reaped from properly designed, trained, and validated AI tools. AI tools, despite having made immense strides in the field of medicine, are still in their infancy, and it remains to be seen whether and how AI supplements or supplants human endeavor and intelligence in the future.

The authors should strongly consider writing a detailed and balanced review article on the subject.
