Potential competing interests: No potential competing interests to declare.

Thanks for the opportunity! This is a good way to show that scientific publication does not have to be boring or just in one way.

This paper is important because this is a really big problem now in science, the pressure to publish no matter what it takes, maybe you need to finish your analysis with some of slow science.

The other point you must write on it is about paper mills and bought authorship, right now is a business to sell documents, without telling the author the big problem that mean! When you sign a paper you are responsible for all you declare on it and if you do not know what is in the paper could be a problem for your development or career. Also, as I always said, you have to built a career on your area step by step, not running.

I hope this comment would help to improve the article!
