The present research article i.e. "Optimizing Wastewater Treatment Performance System and Achieving Greater Efficiency to Improve Water Quality for Sustainability — A Review" by Nirmala and Prakash focuses on the treatment of wastewater by several methodologies. there are certian critical issues within the article that are listed below.

1. Abstract seems to be the gerenal introduction of the article. instead it should carries the important results from the litrature.
2. Litrature seems to very weak need more litrature on the present topic.
3. authors should compile the results of waste water treatment in form to tabular data on a particular adosbents
4. More figures form the litrature should be added to get the better clarity,
5. Agricultural waste for waste water treatment section should be added.

Overall the article needs major revision.
