Abstract

Specify quantitatively the results of this research in terms of performance indicators (i.e., accuracy percentage, correlation coefficient, error, or anything related).

Literature Review

Identify the gaps in the research and what your action is to fill these gaps.

Methodology

A precise and detailed methodology for this research should be included.

4.1 Understanding CNNs

This part is not the result of the research. It is more towards the methods used in this study. It is suggested to move this section to the methodology section.

This paper is written more towards a review instead of the author's own findings. The methodology was not well elaborated in terms of the algorithm, the number of samples, data pre-processing, and post-processing. The results were also vaguely explained.

If this is a review paper, a thorough review should be conducted to identify the algorithms, sample processing, and performance indicators of each algorithm. The title should state that this is a review paper.
