Potential competing interests: No potential competing interests to declare.

The article entitled "Solving Pallet Loading Problem with Real-World Constraints" is interesting and provides some practical implications for solving logistic problems as well as enhancing logistics efficiency. The structure of the article is sound and quite well organized. However, there are a few areas in which the author can improve in order to increase the effectiveness of the article. The following are some areas that may require further elaboration.

- The author provided a review of both Heuristic Methods and Exact Methods. However, it is not too certain how both methods are related to the method used in this research. Perhaps further elaboration can help to illustrate the method being used in the study.
- The author provided rather a short conclusion, to sum up the research study. It is very much straight to the point. However, the audience may need to seek more information from the outcome of this study or perhaps to implement the research results into their logistic problem. Therefore, it is recommended that the author elaborate more and provide the research implication for this study.
