Congratulations for this paper. A few queries and suggestions:

1. Title - Make it 'Menstrual pattern'
2. Title - Make it 'Infection'.
3. Introduction - 3rd Para - Virchow's Triad... Sentence is incomplete.
4. Patients and Methods - 'Past history of COVID'... Specify the time period.
5. Patients selected on the basis of suspected clinical findings can lead to bias. How was this dealt with?
6. Were patients with co-morbidities like DM/HT/Liver Disease/Respiratory illness or COPD included in the study? If no, mention this in exclusion criteria. If yes, how were the confounding factors dealt with?
7. Any hormonal studies done in the patients with menstrual irregularities?
8. Any Trans Vaginal Sonography done?
9. Any difference in the menstrual pattern in mildly ill and severely ill patients?
10. How many patients reported to the doctor/hospital with menstrual complaints?
