Potential competing interests: No potential competing interests to declare.

We extend our appreciation, and gratitude goes to Qeios for providing the opportunity to review the paper titled "The Influence of Hot Extrusion on The Mechanical and Wear Properties of an Al6063 Metal Matrix Composite Reinforced With Silicon Carbide Particulates."

The paper can be accepted, but certain corrections need to be made to improve its overall quality.

Fig.3 is not clear; replace it with a good quality image.

The discussion part was not enough. The relation between hardness, impact, and tensile results should be explained.

In the Conclusion: It is necessary for you to add more detail that captures the essence of the manuscript and highlights the main points to give a comprehensive overview of the manuscript.
