Potential competing interests: No potential competing interests to declare.

Introduction:

The introduction is long. Ensure that the purpose and scope of the manuscript are clearly articulated from the beginning. Consider streamlining the introduction to maintain a clear and focused narrative.

Methods:

1. Please clarify fully vaccinated and partially vaccinated patients.
2. Please clarify the type of diabetes and patient age in the inclusion or exclusion criteria.
3. Please describe the primary and secondary outcomes.
4. Please write a statistical analysis part with detail.

Results:

Please write the number along with the percent in tables, e.g., N (%).

You can merge tables 2 and 3 into one table. Also, in Table 3, bringing t and df is unnecessary.

Discussion:

The discussion part is not well written.

Ensure that the discussion is centered around the key findings of the study. Clearly articulate the significance of your results and how they contribute to the broader understanding of the topic. Review the content to avoid repeating information already presented in the results section. Instead, use the discussion to interpret and contextualize the results. Take the opportunity to synthesize the results and draw connections between different findings. Discuss any unexpected results and their implications. Acknowledge and address any limitations of the study. This adds transparency to your research and provides a context for readers to interpret the results. Compare your findings with the existing literature in the field. Discuss how your results align with or differ from previous studies and theories. Include a section on future directions to guide further research in the area. This adds depth to the discussion and showcases the broader implications of your work.
