Immune-mediated necrotizing myopathy

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Immune-mediated necrotizing myopathy. ORPHA:206569*

Necrotizing autoimmune myopathy (NAM) is a rare form of idiopathic inflammatory myopathy characterized clinically by acute or subacute proximal muscle weakness, and histopathologically by myocyte necrosis and regeneration without significant inflammation.
