

# Review of: "Sustainable Agriculture: Aquaponics-Integrated Greenhouse Cultivation of Cantaloupe with Drip Irrigation System"

Ionel Lucian Dumitrescu

Potential competing interests: No potential competing interests to declare.

The idea of this article is good, but the article cannot be considered a scientific research article; rather, it is a popularization article on techniques for growing sweet melons in the greenhouse and the use of drip irrigation systems. I suggest revising the writing style and paying attention to the grammatical rules of the English language. I also suggest that in Figure 2, English must be used, as it is a language of international circulation.
