

Review of: "An insight into the possible benefits of cupping therapy in COVID-19"

Linda Qiu

Potential competing interests: The author(s) declared that no potential competing interests exist.

The authors tried to give an insight into the “possible” benefits of cupping therapy in COVID-19. In fact, cupping therapy is already being administered for Post-COVID-19 syndrome.

It is important to differentiate the different stages of COVID-19 and post-COVID-19 syndrome.

The authors cited some symptoms for which cupping therapy was shown to be effective. It is not enough to support the argument that cupping therapy is effective for those symptoms caused by COVID-19.

The practice of wet cupping and dry cupping should be viewed differently too.
