Review of: "Integer topological proof of Dirichlet's theorem"

Daniele Toller

Potential competing interests: No potential competing interests to declare.

The topic is interesting, but I could not read follow the exposition of the paper for the following reasons:

1. I advise the author to spellcheck it, and correct some obvious typos (e.g. "it's" in place of "its", the author appears to be called "Danna Banana", page 2 is almost empty, etc.).
2. There are pieces of notation not introduced (e.g. \mathbb{N}_p in the last line of page 1).
