I have found the manuscript titled "The Vicious Circle of Climate Challenges With Soil in 5 Continents Caused by Low Cognitive in the Process of Agricultural Revolution in the World" very interesting in terms of topic and content, but it is still not ready for publication. I recommend a review of grammar and typographic mistakes, but also a clearer rearrangement of paragraphs and the reconsideration of the abstract. The sentences sometimes are too long and repetitive in meaning. Figures, although very interesting, could be better positioned. Overall, if it is deeply revised, it might reach its potential for publication.
