Thank you to the authors for conducting the study. I have some queries for the authors regarding the manuscript:

1. The Introduction section of manuscript is too long and not related to the topic of the current study. It should summarize what the problem is/what is the current status on its treatment/ what is the lacunae/ what you propose to do? First 17 lines of introduction can be summarized in 2-3 lines (regarding epidemiology of cervical cancer)
2. In the material and method section sampling technique mentioned is non-convenience sampling but the same is mentioned as convenience sampling in discussion section. Please clarify.
3. Please specify the concurrent therapy mentioned in the inclusion criteria.
4. Too many tables.
5. Discussion section: avoid single line paragraphs.
6. Conclusion: "pelvic floor muscle strengthening exercises could effectively" all the words preceding this could be removed.
