The article "Digital UAE - a platform for demographic processes management" is really interesting, overall in the second part, when they talk about Agent-based model and go inside the comparison.

I think it can be enhanced by following the following steps:

- Modify the abstract indicating scientific purpose and objectives, methodology, and main results.
- Insert an introduction on the theme (demographic processes), on the context (UAE), and on the main concepts described in the paper. The theoretical framework and the previous research on the topic are not reported.
- Justify why have you chosen this case.
- Modify language in a scientific form, less colloquial.
- Pay attention to figures: data must be understandable without reading the text.
- Methodology: specify, also critical aspects of data collected.
- Findings: must be better underlined because they are really interesting!
