The paper entitled "Aquaponics Unveiled: Efficient Household Farming" supposedly authored by Dai-Long Ngo-Hoang is the most clear example of plagiarism I found in my life.

Dai-Long Ngo-Hoang didn't just copy some ideas, he copied the text (word by word) and all the figures, without having made the slightest reference to the real author, Beecher LE.

This is the real paper, published 2 years ago:

Beecher LE. Aquaponics: system layout and components. Clemson (SC): Clemson Cooperative Extension, Land-Grant Press by Clemson Extension; 2021. LGP 1123. <http://lgpress.clemson.edu/publication/aquaponics-system-layout-andcomponents>.

The only sections Dai-Long Ngo-Hoang wrote by himself are the discussion and the conclusion, which are grandiloquent, inaccurate and not well written.

Plagiarism is a shame and an offence for all the scientific community. Obviously this paper has to be rejected, and the preprint that appears in Dai-Long Ngo-Hoang researchgate profile has to be removed.

To finish, I have to say that I had to give this paper a star because it is the only way in which the system will let me post my comments. It doesn't deserve anything but rejection.
