

Review of: "Factors Associated with Contraceptive Use Among Migrant Female Head Porters in the Kumasi Metropolis"

Mukta Singh Bhandari

Potential competing interests: No potential competing interests to declare.

This was a very interesting study done in vulnerable group of population. However, I have some recommendations and comments.

1. The introduction could be more focused on Ghana, female head porters and similar previous studies.
2. Methodology: It is not clear which questionnaire was used. Was the questionnaire self prepared and pre-tested or was a standard questionnaire been used in the study? It is also not clear how information was collected from the individual. Was it collected individually at porters residence or were group of respondents gathered and information was collected? How was confidentiality maintained if in groups?
3. Table 1: In the table, % has been kept at some places and not in other places so, uniformity is required.
4. Discussion: It should be more focused on the findings of the study according to our objective so, the first paragraph doesn't seem logical.
