Potential competing interests: No potential competing interests to declare.

This paper analyzed the influence of environmental education on both knowledge and attitude of students on waste segregation.

The authors conducted a quasi-experimental research between 200 respondents.

I enjoyed reading this paper very much. It is well written, and the introduction is well fundamented.

The authors could cite on the abstract the use of theory of planned behavior.

The conclusions show that there are significant differences on knowledge and attitude between students exposed to environmental education and those students that are not exposed to environmental education.

Overall, I believe this paper is suitable for publication and reflects a relevant research.
