Title: The Efficacy of Copper Nanoparticles in Treating Viral Skin Infections: A Systematic Review and Meta-Analysis

The current manuscript is review work on copper nanoparticles in treating viral skin infections. The authors have written the feasibility for viral infections by this copper nanoparticles

1.However, some important aspects of nanoparticles related infections are missing. Recent research work related to this are missing. Need to added more recent research papers.

2.Some specific discussion must be provided for the review article.

3.Lack of Identified Knowledge Gaps: The article falls short in explicitly identifying knowledge gaps within the existing literature.

4.Insufficient Deep Discussion: The article could benefit from a more in-depth discussion of the results of previous research , providing a deeper analysis of the findings.

5.I have some technical and grammatical queries the authors need to address before its acceptance.
