# Steroid-responsive encephalopathy associated with autoimmune thyroiditis

INSERM

## Source

*INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Steroid-responsive encephalopathy associated with autoimmune thyroiditis. ORPHA:83601*

Steroid-responsive encephalopathy associated with autoimmune thyroiditis (SREAT) is a rare, acquired, neurological disease characterized by encephalopathy associated with elevated antithyroid antibodies, in the absence of other causes. Clinical presentation varies from minor cognitive impairment to status epilepticus and coma, and frequently includes seizures, confusion, speech disorder, memory impairment, ataxia and psychiatric manifestations.
