Potential competing interests: No potential competing interests to declare.

Although it is a commentary article, it needs more talk, more references, some links between major pillars mentioned in the manuscript. It is difficult to combine both pathogen and culture in one commentary article; each can be a separate full-text article.

On page 2, line 1, "Climate change will significantly impact both human migration and population health, including infectious disease," combining these major effects in one sentence is not correct.

Another sentence ("Climate change will likely affect the incidence and prevalence of both residual and imported infections worldwide [6]. Although climate affects the range of infectious diseases, still the questions; whether it affects the intensity or timing of outbreaks?")

In both the above sentences and the other sentences in the manuscript, one can notice there is a lack of fluency and ordinary level in writing, i.e., it's somehow confusing to follow.
