Potential competing interests: No potential competing interests to declare.

There are unnecessary bold elements in the intro write-up, for example, "it is **primarily herbivorous**, with **aquatic macrophytes**, algae," and capitalized words like "Moisture, Crude fiber, ... Ash, Nitrogen free Extract, and Protein Content." The author needs to standardize the words/phrases used.

In the experimental method and results sections, the treatments do not match the methods in the abstract. In the methodology section, the authors mentioned eight treatments, but in the abstract or in other places, it is stated as seven; please clarify the confusion of terms. Equations used need to be clear and explained properly to avoid confusion.

In the results section, illustrations would be better in graph form for explaining the results obtained.

In the reference list, authors should be more careful about appropriate and consistent style.
