**Potential competing interests:** No potential competing interests to declare.

The article titled "Approaching to the Medicolegal Issues of Temporal Lobe Epilepsy: A Narrative Review" offers a comprehensive overview of the complex interplay between temporal lobe epilepsy (TLE) and various medicolegal aspects, including criminal behavior, sudden unexpected death in epilepsy (SUDEP), and forensic evaluations in court settings. Here are several strengths and weaknesses of the article based on its content and structure:

## Strengths

1. **Comprehensive Coverage:** The article thoroughly discusses the different aspects of TLE, particularly its association with criminal behavior and the challenges it presents in legal settings. It provides a detailed historical perspective and examines contemporary research, which enriches the reader's understanding of the topic.
2. **Integration of Multidisciplinary Perspectives:** The authors successfully integrate insights from neurology, psychiatry, forensics, and law, providing a multidimensional view of the issues at hand. This interdisciplinary approach is crucial for topics that lie at the intersection of medicine and law.
3. **Detailed Case Studies and Data:** The inclusion of specific case studies and empirical data, such as the criteria for diagnosing epilepsy-related aggression, helps ground the discussion in real-world applications and provides evidence-based insights.
4. **Clear Structure:** The article is well-organized into sections that logically progress from general information about TLE to more specific discussions on its medicolegal implications. This structure aids in comprehensibility and allows readers to easily follow the narrative.

## Weaknesses

1. **Title Clarity:** The title might benefit from slight modification for clarity and impact. For instance, "Approaching the Medicolegal Issues of Temporal Lobe Epilepsy" might be rephrased to "A Comprehensive Review of the Medicolegal Implications of Temporal Lobe Epilepsy" to better reflect the narrative and analytical depth of the review.
2. **Potential Bias in Narrative:** While the article aims to provide a balanced view, there are sections where the narrative could be perceived as slightly biased towards highlighting the criminal aspects of TLE. A more balanced discussion of the non-criminal implications could provide a fuller picture of the condition's impact on individuals.
3. **Lack of Discussion on Methodological Limitations:** The review discusses various studies and findings without substantial critique of their methodologies. Including a discussion on the limitations of existing studies could enhance

the credibility of the review and provide a clearer picture of where further research is needed.

4. **Accessibility for Broader Audiences:** The article is dense with technical jargon and detailed medical and legal discussions, which might make it less accessible to readers who are not specialists in these fields. Simplifying the language or providing summaries for complex sections could make the content more accessible to non-specialists.

Overall, the article provides a valuable resource for understanding the intricate relationships between temporal lobe epilepsy, behavior, and legal responsibilities. However, enhancing the discussion on methodological limitations, balancing the narrative, and improving accessibility could make it an even stronger contribution to the field.
