

# Review of: "The number of free electrons per atom in a metallic conductor"

Mohammad Mohsen Peiravi

**Potential competing interests:** No potential competing interests to declare.

The article's structure does not meet the standards. There is insufficient discussion of novelty and explanation. The introduction does not adequately cover all related research, and the last paragraph does not address the main points of this article. The discussion and results are unclear. The structure resembles that of a short report rather than a research article.
