A nice paper about cancer care in Nigeria and Romania but I have some comments:

1. I couldn't understand from the manuscript why are both countries together, what is the importance of comparison between Romania and Nigeria? What is the added value?
2. It would have been better if there are more details about patient's demographics (their age, education, type of cancer etc) these details are of value to have an idea about cancer age in both countries and these data may affect the patients' perception about their care.
3. In the part of questionnaire covering (**Access and responsiveness**) domain, no information about the emergency services which is a very important part of cancer care and of high concern to patients.
4. I couldn't find a supplementary file including the questionnaire used and how it was structured ? by authors ?

Wishing you best of luck
