Potential competing interests: No potential competing interests to declare.

Major:

The manuscript is very time demanding.

Some corrections are needed for the acceptance of the manuscript.

The abstract part has to be more specific and informative, also more constructive.

Regarding the methodology, I think specially the hematological, biochemical and histopathology parts need to be more precise and brief.

Result section,

Table 1, 2, 3: it is not showing the tabular form please correct that.

Regarding the graphs it has to be axis titles are not matching perfectly with the figure, please modify it in a more descent way. Please check the significance more carefully.

The histopathological figures (Figure 3 and 4) are not clear and not well marked or labelled.

Please use arrow and arrow head for the labeling of the figures and also use the brighter version of the images which will make the understanding more clear.

The discussion part has to be more precise and well connected to the results. More relevant references need to be added.

Conclusion section need to be extended a bit more with the summary of the whole result section as well as the importance of the study. Moreover some future prospects or the impact of the manuscript in the future research or human kind will be really enhance the quality of the manuscript.

Minor:

Please make an English correction of the manuscript.

Please check sentence making and also spelling of some of the words.

After all these revisions I guess the manuscript is good to be accepted.
