Thank you for your invitation to review the article entitled (Artificial intelligence in the service of health and safety at work: Perspectives and challenges from now to 2035 - A prospective study)

The topic of the present article merits further investigation. The paper's theme is interesting and novel. The data presented is original (however, sample size is less). The data and tables are acceptable.

I recommend publishing the manuscript with the following modifications:

It is my pleasure to send you my comments after revision of this article

1	Key words	Should be arranged in alphabetical order or NLM-Mesh-terms.
2	Introduction	-INRS: Kindly mention the abbreviation at first appearance in its original language. -the aim and objectives should be clearly stated at the end of the introduction rather than in the Methods
3	Method	-The exclusion criteria for that lead to the single withdrawal not mentioned clearly -The method is not structured and is too complex to follow Suggestion: -Language editing
4	Discussion	There is no list of references used even those used to write the introduction!
