

Review of: "Marine Medical Response: Exploring the Training, Role and Scope of Paramedics and Paramedicine (ETRS_p)"

Guglielmo Imbriaco

Potential competing interests: No potential competing interests to declare.

Title: I suggest removing the abbreviation (it is not used anymore in the manuscript)

Ethical considerations is repeated. I suggest writing this subheading once, in the Methodology section.

Marine Specific Injury Examples: I suggest adding 2-3 lines of introduction before the examples.

"...The following tables" I suggest writing Table 1 and 2.

"The potential incorporation of portable diagnostic modalities, such as X-ray...", I'm pretty doubtful about the feasibility of x-rays in marine environment. I suggest limiting to US.

I think the absolute pressure equation does not add value to this paper and is not necessary.

Figure 2 may be difficult to understand. It requires a more detailed caption.
