Quality Manuscript. First of all i would like t appreciate the efforts taken by the authors in such area research. Its quiet important in the medical field. Suggestions on my side to improve the manuscript are as below:

1. Need to remove the words like we, our etc. instead you can use research word.
2. Need to do the comparative analysis survey of previous work by considering potential parameters (Table heads-→ Ref. no. title, Dataset used, Mthods, % Accuracy, Advantages and limitations).
3. Provide the proposed system architecture.
4. Kindly provide the Dataset description in methodology section.
5. Need to specify/highlight the accuracy in the abstract section with other QoS Parameters.
6. Data and its analysis is not correctly explained.
