Potential competing interests: No potential competing interests to declare.

1. For the affiliation of the authors, no need to put 1,2 since it's the same address.
2. The graphic summary is not readable.
3. The figures representing the structures are too large.
4. On page 7 for anti-convulsion activity, I don't see a triazole ring.
5. Methods of synthesis of Quinolone derivatives: Scheme 1 needs to be reviewed.
6. Scheme 2 is to correct or explain the mechanism.
7. Scheme 6 and 12 are identical; why use them again?
- 8) It is imperative to repeat all the Schemes; the structures must be unified.
