

# Review of: "[Research Note] Reprogramming of GLP-1 Response at Prediabetes for the Prevention of Type 2 Diabetes: The Role of Albumin and GLP-1 Receptor Agonists"

Diana Gamboa

Potential competing interests: No potential competing interests to declare.

The brief research note on reprogramming GLP-1 leads to a novelty scenario where type-2 diabetes can be prevented; however, an invitation to the authors to describe a deeper relation on how the glucagon-like peptide-1 is related to albumin and  $\gamma$  dipeptidyl peptidase-IV (DPP-IV).

Please include the advantages of analyzing GLP-1 from the mathematical modelling.
