

Review of: "Women In Slum Risking Their Safety To Access And Usage Of Basic Water And Sanitation Facilities"

Anne Wambui Mumbi

Potential competing interests: No potential competing interests to declare.

The review article address current issues of women safety and access to water resources. The literature review section needs additional literature and needs more in depth analysis. I would recommend removing the data analysis section as the paper reports already published work and no analysis exists in the paper. The tally marks on the Table 2 are best presented as numbers instead to aid the readers to understand the data. All the best!
