**Potential competing interests:** No potential competing interests to declare.

Abstract should be improved by adding some important findings.

Methodology is not clear. Why this method? Explain from the literature / comparatively explain what the uses of this methodology are. Use plans/sections/3D as necessary.

Findings/Discussions are weak. The use of figures/tables will be useful to compare results and explain discussions accordingly.

Conclusion is weak because some findings/discussions must be here in order to conclude the article.
